Concerning: Cleaning in the fish industry.

As is common in the fish industry, we have high water usage levels, and suffer therefore from the associated limescale problems.

Cleaning the stainless steel surfaces presented us with special problems and required the daily use of limescale detergents.

We consulted our plumbing specialist in an effort to find possible solutions.

He arranged a meeting with Aqua Unique. Following their explanation of how the magnetic water treatment worked, we decided to install the system on 2 of our high-pressure cleaners.

Today the limescale is so soft, that it is removable simply by wiping it away with a cloth.

The plant has now been running problem free for nearly 2 years, and the magnetic system has paid for itself through the savings attached to the previous costs of limescale detergents.

Yours sincerely

Povl Erik Jensen
